About the Client

Brown University's new 84,000 square foot aquatics and fitness center is a \$46-million addition to the existing athletic facilities on the Brown campus. The Aquatics Center includes a 56-meter swimming pool for varsity competition and recreational use; three meter diving and seating for 800 spectators. Additionally, there is a 10,000 square foot multi-purpose Fitness Center; a 12,000 square foot Strength and Conditioning Center; a green space Athletic Center; three exercise studios; offices for coaches and administrative staff; locker rooms and social space -- including a lobby with a café

Scope of Work

SyNet has an established relationship with Brown University – providing for their communications integration services on many projects over the years. With regard to the Aquatics Center, SyNet was involved nearly two years prior to commencement of construction – for we played an integral role in re-routing the existing OSP fiber and copper infrastructure. Further along the construction timeline, SyNet provided the materials, labor and project management services for installing a structured cabling system to support the data and voice communications throughout this new facility addition. Likewise, SyNet installed a fiber link for Brown's television studio – allowing for domestic and international live and taped interviews. Finally, SyNet provided access control and security systems; cabling infrastructure to support the WAPs; and communications integration installation for the offices of coaches and staff.
