About the Client

New England Institute of Technology is a private, non-profit technical college that currently offers over 30 Associate's and Bachelor's degree programs.

NEIT remodeled an existing 270,000 square foot facility in East Greenwich, Rhode Island, to be the college's new main campus location. The goal for the renovation was to provide for a state of the art, student-centered facility – with a focus on learning – and all the while, incorporating a strong consciousness towards being environmentally friendly.

Scope of Work

SyNet provided for the installation of structured cabling and security cabling systems to include fiber optic backbone and copper distribution schemes for both phases of the project. These systems support all of the voice and data communications throughout the new NEIT campus.

In addition, SyNet rough cabled all associated access control and surveillance to further assist in the project turnover. SyNet was tasked with mounting Wireless Access Points in order to ensure ample Wi-Fi access throughout the new campus grounds as well.
